

CAR DEALERSHIP

Teacher: Mork ratha

Bou Sengfong & Norng Piseth

OBJECTIVE OF PROJECT

- To simplify car sales and customer management for dealerships
- To provide a secure system for storing customer and payment information.
- To allow admins to track sales performance easily.
- Create a centralized platform for cars, customers, and sales.
- Efficient inventory management: Track available and sold cars.
- Easy access to sales records for decision-making.
- Quick and safe purchase process.
- Saves time and resources.

FEATURES OF SYSTEM

- Admin and User System.
- Manage Cars (Add, Edit, Delete, View).
- Search and Filter cars by brand, price, and model.
- Responsive Interface using HTML, CSS, and Bootstrap.
- Upload and display car images with details.
- Sales and transaction tracking system.
- Customer feedback and inquiry support.

CHALLENGES AND PROBLEM SOLVING

- Handling secure login and session management for customers and admin(used session management and authentication checks).
- Used session management and authentication checks(structured database with tables for cars, customers, sales, and appointments).
- Displaying dynamic data cleanly in the Backend(Implemented reusable functions for database queries and backend display).

FUTURE IMPROVEMENT

- Implement car reviews and ratings by customers.
- Add advanced search filters (price, mileage, color).
- Build mobile app version.
- Implement analytics dashboard for admin to track trends and performance.
